

SWISS EXCLUSIVITY

FACIAL REJUVENATION

Without Surgery

Our secrets for a natural-looking result!

There are several non-invasive methods available that can combat dehydration and skin aging, repair the collapse of certain parts of the face and erase wrinkles. We take a closer look at these techniques with Dr Véronique Emmenegger, Medical Director of the Clinic Lémanic (Lausanne - Switzerland) and Dermatologist specialist in Anti-Aging and Aesthetic Medicine.

Dr. Véronique
Emmenegger

Doctor in Medicine. Double specialist qualification from the FMH (Swiss Medical Authorities) in Clinical Dermatology, Venereology, Allergology and Immunology. Medical Director and co-founder of Clinic Lémanic in Lausanne, Switzerland, since 1998.

ABOUT CLINIC LEMANIC

After 18 years of experience, Clinic Lémanic has become a major center of reference in the field of aesthetic, anti-ageing, preventive and regenerative medicine. The clinic offers a wide range of innovative and non-invasive solutions for preventing and treating the ageing process through a global and complete approach. Unique in its concept, the clinic was awarded the prestigious IIPP "Merit for the Development in Medicine and Aesthetic Technologies" at UNESCO, Paris, for its innovation and the excellence of the services and results.

Regenerate the skin and erase wrinkles

In order to achieve optimum results, it is important to adopt an approach that respects and enhances not only the patient's appearance but also their personality: facial expressions, smile and eyes. The injection of new generation substances is an effective solution, providing personalised treatment and a natural-looking result. This is particularly the case for hyaluronic acid, which is ideal for filling the nasolabial folds (around the nostrils) and marionette lines, which stretch down from the corner of the mouth towards the chin. Similarly, botulinum protein, is perfect for relaxing in one session the facial muscles and reducing wrinkles such as forehead lines and crow's feet (eyes sides).

Redefining volumes

Certain areas of the face tend to become more marked with age. In order to restore the volumes in these areas in a balanced way, it is important to carefully position the entry point for injecting the filler product. The reinjection of autologous fat, harvested from the patient, is interesting to restore volumes in the cheeks and cheekbones, to correct deep hollows in the facial volumes. It can also be used to restructure a severely aged face with sagging skin, with a great rejuvenation effect thank to its natural content of stem cells.

Nitric oxide: Youth molecule

As a real carrier molecule with anti-ageing properties, nitric oxide acts directly upon the body's cells. By stimulating its production, the distribution of nutrients to the cells is optimised, which improves the skin quality by its global action. Combined with the innovative Photo-BioModulation technique, which uses different lengths of light waves, we can beautify the skin over time by treating wrinkles, a dull complexion and flaws.

Reshape the oval of the face

The HAUTE COUTURE concept offers an impressive lift without surgery, thanks to its regenerative threads with a firming and rejuvenating effect that smooth the contours of the face and neckline. This technique is recommended for fine skin and has excellent potential for reshaping and refining the lower part of the face, particularly if the skin has superficial textural flaws (irregularities) or pigmentation issues (dyschromia). Associating techniques such as autologous plasma and Light therapy enables us to homogenise the biological rejuvenation and tissue bio-stimulation processes by stimulating the skin's natural synthesis of collagen, elastin and hyaluronic acid. Result: redefined contours and skin that looks lifted, firmed and plumped immediately after treatment.
